

# Benchmark Circuits for IBM's Quantum Computer

## 1 Introduction

IBM's 5 qubit quantum computer [1] supports gates from the Clifford+T gate library. This repository contains some Clifford+T circuits that have been transformed to be executed on IBM's Q5.

## 2 Benchmark Circuits

The following circuits are available in the folder labeled `original`.

Name	Qubits	Gates	Depth	T-depth	Source
<code>a2x_c.qc</code>	4	31	22	5	[2]
<code>a2x_e.qc</code>	4	30	20	4	[2]
<code>Full_Adder_c.qc</code>	4	20	19	7	[2]
<code>Full_Adder_d.qc</code>	4	22	15	2	[2]
<code>Full_Adder_e.qc</code>	4	21	12	2	[2]
<code>Toffoli_c.qc</code>	3	17	16	6	[2]
<code>Toffoli_d.qc</code>	3	17	12	3	[2]
<code>Toffoli_e.qc</code>	3	17	12	3	[2]

The transformed circuits—to fit the Q5 architecture—are found in the folder labeled `IBM`. Different permutations, produce different results. Since the computer has 5 available qubits, circuits can be extended to 5 qubits at no cost. The names of the circuits are obtained by taken the original name and appending the permutation to it. A summary is given below.

Name	Qubits	Gates	Depth	T-depth
a2x_c_01234.qc	5	87		
a2x_c_02341.qc	5	59		
Full_Adder_c_01234.qc	5	60		
Full_Adder_c_01324.qc	5	28		
Full_Adder_d_01234.qc	5	74		
Full_Adder_d_01324.qc	5	42		
Full_Adder_e_01234.qc	5	55		
Full_Adder_e_01324.qc	5	37		
Toffoli_c_01234.qc	5	17		
Toffoli_d_01234.qc	5	25		
Toffoli_e_01234.qc	5	23
